

Project Submission Report

1. Student Details

- **Full Name:** Ngigi Peter Kimori
- **GitHub Username:** Eggcellent
- **Email:** peter.ngigi@strathmore.edu

2. Deployed Project Link

- **Live GitHub Pages URL:**
<https://is-project-2026.github.io/library-catalogue-169613/>

The project is a web-based library catalogue that allows users to search and filter books, view availability, and add or remove books from their favourites.

3. Reflection — Grounded in My Git History

A. My Best Commit

Commit URL:

<https://github.com/IS-PROJECT-2026/library-catalogue-169613/commit/135ed88>

This commit follows common commit practice by using the docs : type and a clear subject. It makes it easy to understand that the commit adds project documentation.

B. A Mistake or Struggle

Link to the evidence:

<https://github.com/IS-PROJECT-2026/library-catalogue-169613/commit/5b7740b>

The project documentation change was accidentally reverted, which created extra work in the Git history. The change was recovered through another branch and merge, and the final version was restored on **main**.

This is visible in my Git history through the documentation commit, the revert, and the later recovery.

C. A Pull Request I'm Proud Of

PR URL:

<https://github.com/IS-PROJECT-2026/library-catalogue-169613/pull/18>

I checked that the search worked by title and author and that the search was case-insensitive. I also checked that the PR was linked to **Issue #8** and that the JavaScript passed the syntax check before committing.

D. One Thing I Would Do Differently

I would check the deployment documentation more carefully before merging the PR. This would have avoided the extra revert and rework that happened later.

Evidence of the original decision

<https://github.com/IS-PROJECT-2026/library-catalogue-169613/pull/23>

Conflict 1 — Same line changed differently

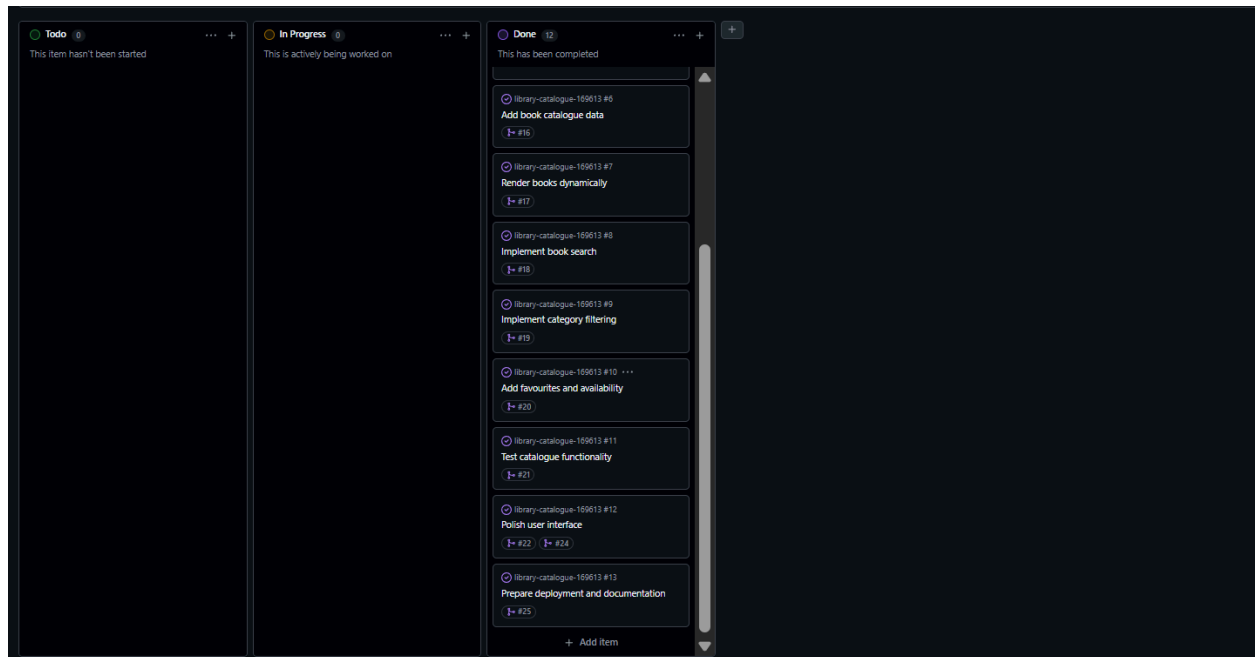

The screenshot shows the VS Code editor with a merge conflict in `index.html`. The conflict is in the `<title>` tag, where the current HEAD (green) has `LibriVault Library` and the incoming change (blue) has `LibriVault Catalogue`. The editor shows the conflict resolution options: Accept Current Change, Accept Incoming Change, Accept Both Changes, and Compare Changes. The terminal output shows the following commands and results:

```
PS C:\Users\user\library-catalogue-169613> git switch -c conflict-1-other
PS C:\Users\user\library-catalogue-169613> git add index.html
>>
PS C:\Users\user\library-catalogue-169613> git commit -m "test: change catalogue title"
[conflict-1-other a06d3f9] test: change catalogue title
1 file changed, 1 insertion(+), 1 deletion(-)
PS C:\Users\user\library-catalogue-169613> git switch conflict-1-main
Switched to branch 'conflict-1-main'
PS C:\Users\user\library-catalogue-169613> git merge conflict-1-other
Auto-merging index.html
CONFLICT (content): Merge conflict in index.html
Automatic merge failed; fix conflicts and then commit the result.
PS C:\Users\user\library-catalogue-169613>
```

B. Project Board

The screenshot shows the Project Board for the `Library Catalogue Development` project. The board is organized into three columns: **Todo** (0 items), **In Progress** (0 items), and **Done** (12 items). The **Done** column contains the following tasks:

- library-catalogue-169613 #2: Set up project structure
- library-catalogue-169613 #3: Build navigation and header (linked to #14)
- library-catalogue-169613 #4: Build catalogue interface (linked to #15)

C. Branching Architecture

```
PS C:\Users\user\library-catalogue-169613> git branch -a
  feat/10-favourites-availability
  feat/11-test-catalogue
  feat/12-ui-polish
* feat/13-deployment-documentation
  feat/2-project-structure
  feat/3-navigation-header
  feat/4-catalogue-interface
  feat/6-catalogue-data
  feat/7-dynamic-books
  feat/8-book-search
```

ProTip! Exclude everything labeled `bug` with `-label:bug`.

5. Merge Conflict Evidence

Conflict 1 — Content Conflict

What cause did you use?

Content conflict — both branches changed the same line in the same file.

Step 1: Generating the Clash

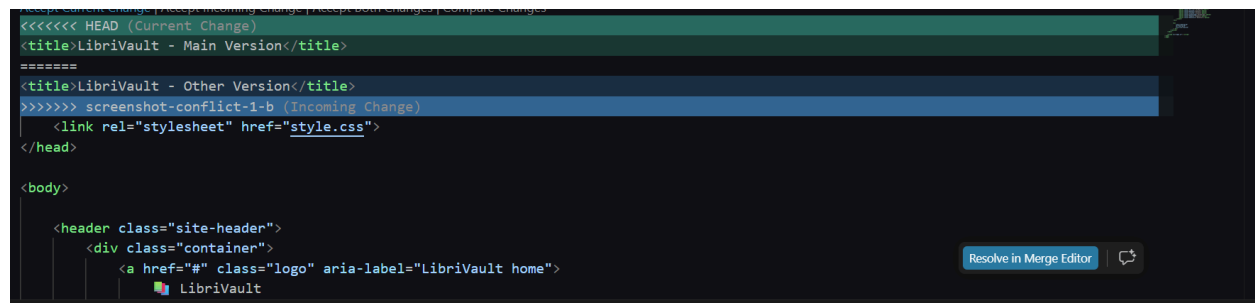

```
tml
PS C:\Users\user\library-catalogue-169613> git add index.html
PS C:\Users\user\library-catalogue-169613> git commit -m "test: change catalogue title differently"
[screenshot-conflict-1-b f1f083a] test: change catalogue title differently
1 file changed, 2 insertions(+), 2 deletions(-)
PS C:\Users\user\library-catalogue-169613> git switch screenshot-conflict-1-a
Switched to branch 'screenshot-conflict-1-a'
PS C:\Users\user\library-catalogue-169613> git merge screenshot-conflict-1-b
Auto-merging index.html
CONFLICT (content): Merge conflict in index.html
Automatic merge failed; fix conflicts and then commit the result.
PS C:\Users\user\library-catalogue-169613> 
```

CONFLICT (content): Merge conflict in index.html

Caption:

I merged the two branches, but both branches had changed the title in `index.html`. Git could not automatically decide which version to use, so the merge stopped and reported a conflict.

Inside the Code Editor — Conflict Markers

```
<<<<<< HEAD (Current Change)
<title>LibriVault - Main Version</title>
=====
<title>LibriVault - Other Version</title>
>>>>>> screenshot-conflict-1-b (Incoming Change)
<link rel="stylesheet" href="style.css">
</head>

<body>

  <header class="site-header">
    <div class="container">
      <a href="#" class="logo" aria-label="LibriVault home">
        LibriVault
```

Caption:

The conflict markers show the two different title changes. I reviewed both versions and decided to keep the main branch version.

Resolution & Clean Merge

After you click **Accept Current Change**, save the file and finish the merge.

```
PS C:\Users\user\library-catalogue-169613> git status
On branch screenshot-conflict-1-a
You have unmerged paths.
  (fix conflicts and run "git commit")
  (use "git merge --abort" to abort the merge)

Unmerged paths:
  (use "git add <file>..." to mark resolution)
    both modified:   index.html

no changes added to commit (use "git add" and/or "git commit -a")
PS C:\Users\user\library-catalogue-169613>
```

Caption:

I removed the conflict by keeping the correct title, saved the file and committed the resolution. The working tree is now clean and the merge conflict has been resolved.

Conflict 2 — Modify/Delete Conflict

Why does this cause a conflict?

This happens when one branch deletes a file while another branch changes the same file. Git cannot automatically decide whether the file should be deleted or kept.

Conflict evidence:

The conflict occurred in **style.css** when one branch deleted the file and the other branch modified it.

```
1 file changed, 2 insertions(+), 1 deletion(-)
PS C:\Users\user\library-catalogue-169613> git switch conflict-2-delete
Switched to branch 'conflict-2-delete'
PS C:\Users\user\library-catalogue-169613> git merge conflict-2-modify
CONFLICT (modify/delete): style.css deleted in HEAD and modified in conflict-2-modify. Version conflict-2-modify of style.css left in tree.
Automatic merge failed; fix conflicts and then commit the result.
PS C:\Users\user\library-catalogue-169613>
```

Modify/delete conflict.

Caption:

This happens when one branch deletes a file while another branch changes the same file. Git cannot automatically decide whether the file should be deleted or kept with the changes.

Resolution

`style.css` was deleted on one branch but modified on the other, so Git stopped the merge and required me to resolve the conflict.

I chose to keep the modified version of `style.css` and completed the merge.

```
Switched to branch 'conflict-2-delete'
PS C:\Users\user\library-catalogue-169613> git merge conflict-2-modify
CONFLICT (modify/delete): style.css deleted in HEAD and modified in conflict-2-modify. Version conflict-2-modify of style.css left in tree.
Automatic merge failed; fix conflicts and then commit the result.
PS C:\Users\user\library-catalogue-169613> git add style.css
>>
PS C:\Users\user\library-catalogue-169613> git commit -m "fix: resolve stylesheet delete conflict"
[conflict-2-delete 0114b6d] fix: resolve stylesheet delete conflict
PS C:\Users\user\library-catalogue-169613> git status
On branch conflict-2-delete
nothing to commit, working tree clean
PS C:\Users\user\library-catalogue-169613>
```

Conflict 3 — Rename/Rename Conflict

What cause did I use?

Rename/rename conflict.

Why does this cause a conflict?

This happens when two branches rename the same file to different names.
Git cannot automatically decide which new filename should be used.

Conflict evidence:

The original file was:

`apps.js`

One branch renamed it to:

`catalogue.js`

The other branch renamed it to:

`library.js`

```

PS C:\Users\user\library-catalogue-169613> git switch conflict-3-rename-a
>>
Switched to branch 'conflict-3-rename-a'
PS C:\Users\user\library-catalogue-169613> git merge conflict-3-rename-b
CONFLICT (rename/rename): apps.js renamed to catalogue.js in HEAD and to library.js in conflict-3-rename-b.
Automatic merge failed; fix conflicts and then commit the result.
PS C:\Users\user\library-catalogue-169613> 

```

Caption:

Both branches were renamed **apps.js**, but they used different filenames. Git could not choose between the two names, so I had to resolve the conflict manually.

Resolution

I kept the **catalogue.js** version and removed the conflicting **library.js** version. I then committed the resolution and confirmed that the working tree was clean.

```

● PS C:\Users\user\library-catalogue-169613> git rm library.js
rm 'library.js'
PS C:\Users\user\library-catalogue-169613> git commit -m "fix: resolve script rename conflict"
U
  apps.js
error: Committing is not possible because you have unmerged files.
hint: Fix them up in the work tree, and then use 'git add/rm <file>'
hint: as appropriate to mark resolution and make a commit.
fatal: Exiting because of an unresolved conflict.
● PS C:\Users\user\library-catalogue-169613> git status
On branch conflict-3-rename-a
You have unmerged paths.
  (fix conflicts and run "git commit")
  (use "git merge --abort" to abort the merge)

Unmerged paths:
  (use "git rm <file>..." to mark resolution)
        both deleted:    apps.js

no changes added to commit (use "git add" and/or "git commit -a")

```
